

THE

FLANGELATOR™

AMAZING!

a breakthrough solution for plumbers and bathroom tile setters

Though installed during rough plumbing, the benefits of the patent pending Flangelator are realized at the finished plumbing stage. Measuring 5" in diameter and 7/8" in height, the plastic template is easily secured to the drain test cap with a single wingnut (not included).

The perimeter of the Flangelator provides tile setters with unprecedented guidance with which to position the underlayment and tiles at the precisely accurate distance from the 3" waste pipe. In addition, six fold down tabs provide returning plumbers with exact screw locations. The Flangelator can then be removed for future reuse.

The Flangelator's six screw tabs are currently positioned in accordance with the Raven Products Stainless Steel Ring. Additional models for both PVC and cast iron products will be available soon.
